HEALTH AND SAFETY CONSULTANCY

GB Capability Statement

Practical support for your people and operations

We help businesses understand their risks, improve their management systems and keep actions moving. Work directly with our founders for a defined project or ongoing support alongside your team.

Service	What we help you put in place
Health and safety support	Practical advice, planned reviews and competent-person support where the agreed scope and cover are suitable.
Audits and action plans	Site inspections, compliance reviews and supplier audits, with clear findings, priorities, owners and deadlines.
RAMS and documentation	Risk assessments, method statements, policies and safe operating procedures tailored to actual work.
COSHH assessments	Product and task assessments, SDS traceability, substance registers and practical exposure-control recommendations.
Legionella risk assessments	Assessment of water-system risks, with clear findings, prioritised actions and practical recommendations.
ISO management systems	ISO 9001, ISO 14001 and ISO 45001 gap analysis, implementation support, internal audits and preparation for independent certification.
Incidents and competence	Incident investigation, corrective actions, toolbox talks, inductions, training matrices and management reporting.

Based in Ellesmere Port, Cheshire. On-site and remote support across the UK for manufacturing, engineering, transport, logistics, fuel and energy, warehousing, construction and multi-site businesses.

THE PEOPLE BEHIND GB

Work directly with the founders

Our founders combine management-system and audit experience with hands-on knowledge of industrial workplaces. We connect the documents and reporting managers need with controls that people can apply at work.

David Glover

MANAGEMENT SYSTEMS AND ENGINEERING

David combines HSE site-lead responsibilities with an industrial engineering background in specialist manufacturing, testing and commissioning. His work includes risk assessments, RAMS, controlled procedures, statutory-inspection coordination and training requirements.

An ISO 45001 Lead Auditor, he also supports ISO 9001 internal audits, document control and corrective-action close-out. His electrical, mechanical and equipment-safety experience helps translate system requirements into practical workplace controls.

NEBOSH National General Certificate | ISO 45001 Lead Auditor | IOSH Managing Safely | Level 3 engineering qualifications

Daniel Brown

OPERATIONAL SAFETY AND MANAGEMENT REPORTING

Daniel has led health and safety support across approximately 40 UK fuel-distribution locations, working with site teams, regional managers and senior leaders. He coordinates audit preparation, investigates incidents and develops SHEQ board packs and dashboards.

His work includes standardising RAMS, operating procedures and policies, reviewing spill-response evidence, strengthening emergency arrangements and delivering workforce briefings. He also carries out Legionella risk assessments. Earlier experience spans major-hazard industry, site supervision, manufacturing and live traffic management.

How we work with you

We first discuss your operation, current priorities and deadlines. We then confirm the deliverables, fees, timescales and responsibilities in writing. During delivery, we keep findings and outstanding actions clear and hand over usable documents with the next steps explained.

We provide consultancy and implementation support. Independent certification bodies award ISO certification; site management retains responsibility for implementing and maintaining operational controls.

DEFINED STARTING POINTS

Three service packages

Each package gives a clear starting scope. We tailor it to your activities, people and site risks, and agree the work, fee and delivery dates before starting.

Site audit and action plan

For one site, one agreed operational shift and up to one day on site. Includes a document review, site walk and discussions with key staff; a written findings report; an editable action plan with priorities, proposed owners and dates; and a 30-minute handover call.

Aim for the report within 5–10 working days of the visit and receipt of agreed evidence. Travel is itemised. Specialist surveys, certification, testing and return visits are separate.

RAMS and COSHH package

For one defined job at one site. Includes one risk assessment and method statement, plus up to five COSHH assessments for specified products and uses. You receive a scoping call, task sequence and controls, a substance register, editable documents and PDFs, one consolidated revision and a short handover.

Aim for a first draft within 5–10 working days once information is complete. You supply current SDSs, task details and site information. Visits, exposure monitoring, engineering design and additional work are quoted separately.

Monthly health and safety support

A named adviser for one agreed business and site, with up to three hours of remote support per month. The allocation includes a 30-minute review call, advice, document review and action tracking, with an agreed support plan, monthly priorities and annual policy review within the allowance.

Start date, working hours, response target, contract term and unused-hours treatment are agreed in the quote. Visits, emergency attendance and work beyond the allowance are separate. A competent-person appointment follows confirmation of skills, scope and cover.

Choose the scope before the price

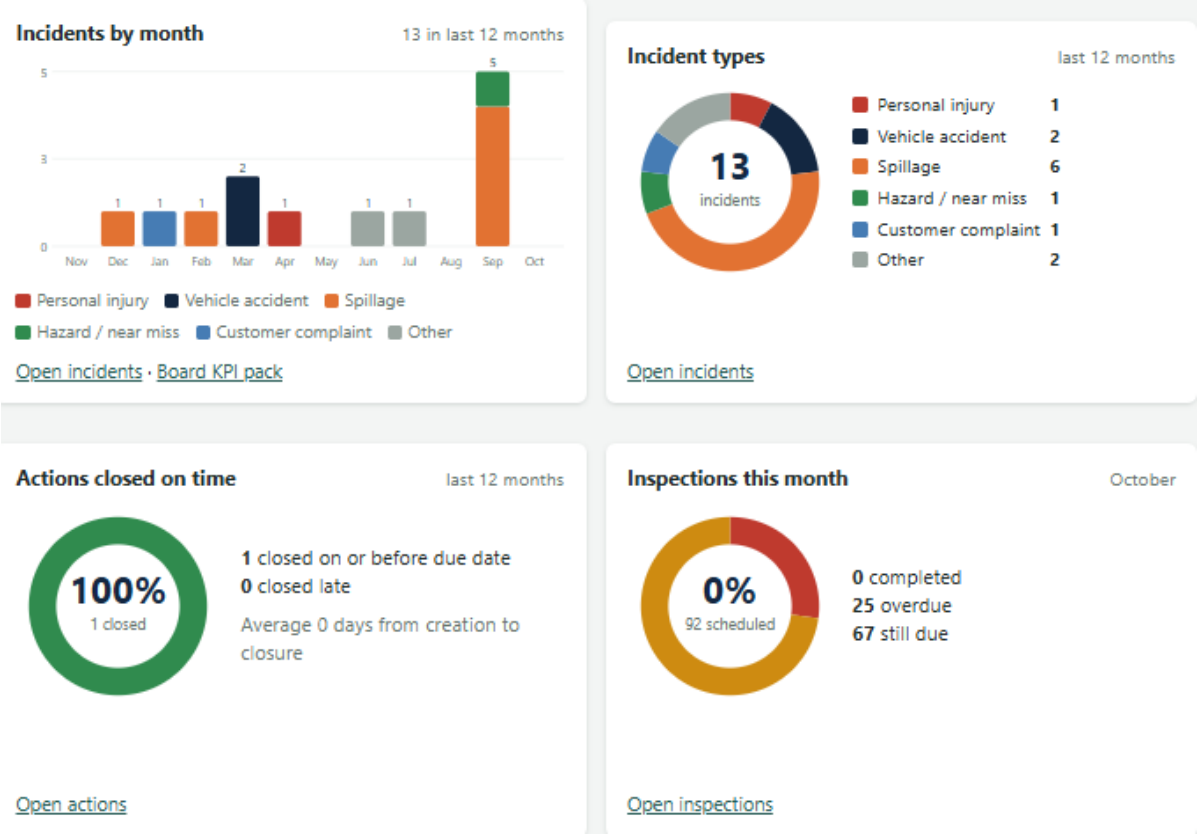

Tell us what needs doing, where the work takes place and when you need it. We will recommend the relevant package or a bespoke scope, with any assumptions and exclusions clearly stated.

Timings depend on availability and complete information. Your team confirms the documents match the work, implements the controls and briefs staff. No audit outcome or certification is guaranteed.

COMPLIANCE MANAGEMENT

Reporting, review and action

The GB-CMS framework brings reporting, actions, controlled documents, training information and management review into a structured approach. We define the workflow around your sites, users and responsibilities.

Illustrative dashboard with example data. Figures show the presentation style and are not client performance results.

A reporting workflow can capture an event, route it for review, assign actions with owners and dates, retain supporting evidence and record verification. Managers can then review outstanding work and trends. Reports remain subject to human review and operational decisions.

A tailored walkthrough can explore desktop oversight and mobile reporting. The available functions, permissions, hosting, integrations, information-security arrangements and licensing are confirmed for the proposed deployment before inclusion in a quotation.

Arrange an introductory discussion

Book a 20-minute Teams call with Daniel

Use the booking link to choose an available time. For an on-site visit or a discussion involving both founders, contact us to agree arrangements.
